

I have good programming abilities and hands-on expertise in a variety of computer languages, including JavaScript. I am adept in JavaScript's fundamental ideas, including functions, closures, event handling, DOM manipulation, and asynchronous programming with Promises and async/await. I've also worked on projects that used front-end frameworks like React, so I'm familiar with ES6+ capabilities. My objective for this unit is to get a Credit or higher, since I am dedicated to expanding my knowledge and implementing it efficiently in real-world situations.
